

FINAL PRODUCT POLISH

A more intentional day

Daymark is a full-stack task workspace with a React client, Express API, and persistent SQLite storage. This final polish brings an editorial dark aesthetic, flexible task organization, and satisfying everyday interactions.

01

Visual direction

A near-black ink canvas, glass panels with soft blur, violet-to-blue gradients, cyan details, restrained serif emphasis, and layered glow create a quiet, premium journal-like workspace. A carefully designed light theme switches smoothly and persists in localStorage.

02

Personal task model

Every task can carry priority, due date, tag, pinned state, one of five accent colors, an optional emoji, and a manually saved order. SQLite migration adds these columns without discarding existing tasks.

03

Everyday interactions

Tasks expand in place for detail, pinning keeps important work at the top, and drag-and-drop reordering persists through a transactional REST endpoint. Checkmarks draw in, cards lift on hover, and cards fade/collapse during deletion.

04

Undo and celebration

Deletion is immediate in the interface with a five-second Undo snackbar and independent pending-delete timers. Completing the final open task triggers a brief, restrained success treatment.

05

Edit stability

Editing remains inline. The scroll position is captured before the composer changes and restored after layout, preventing the earlier jump-to-top issue. Browser verification confirmed identical scrollY before and after edit activation.

06

Responsive and tested

Browser checks passed at 375px, 768px, and 1440px with no horizontal overflow. Five backend tests cover CRUD, metadata, reorder validation, and persistence; two client tests cover feature hooks and responsive/motion contracts. The Vite production build succeeds.

Verification at a glance

5 backend tests + 2 frontend tests passed.

Dark/light preference persists; pin, expand, personalize, reorder, search, filter, sort, undo, and completion flows verified live.

Manual order is preserved beneath pinned tasks.
